How to Open the Frontends

Event Ticketing and Venue Booking System (PHP, MySQL, XAMPP on Windows). Four frontends, one shared backend and database.

Step 1: Start Apache and MySQL

Open **XAMPP Control Panel**. Click **Start** next to **Apache** and next to **MySQL**. Both names turn green.

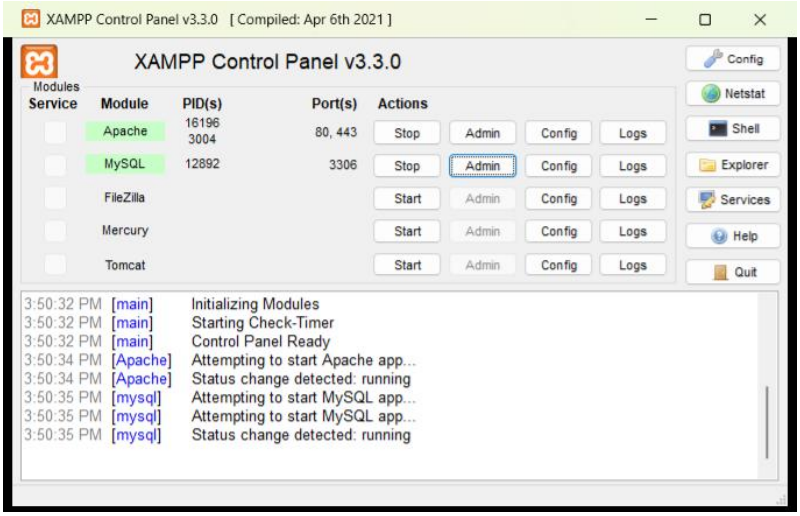

Figure 1: XAMPP Control Panel with Apache and MySQL running (green)

Step 2: Copy the backend into htdocs

Copy the folder **event-backend** into **C:\xampp\htdocs** and rename it to **event-api**.

The frontends look for the API at /event-api/api, so the name must be exactly **event-api**.

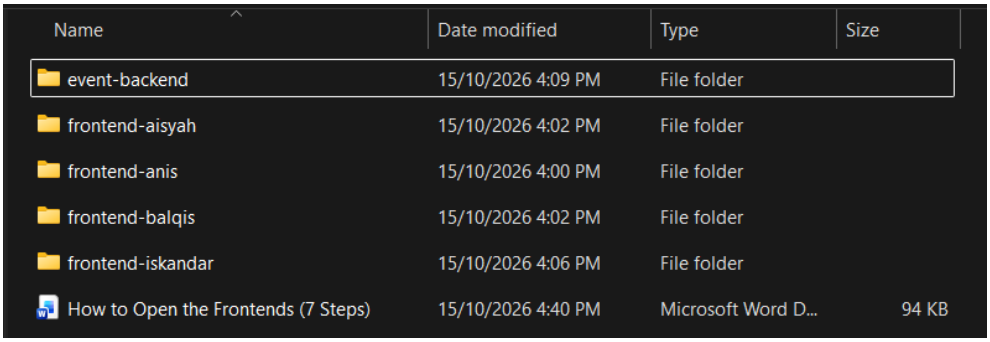

Figure 2: The submission folder (event-backend and the four frontend folders)

Step 3: Copy the four frontends into htdocs

Copy these four folders into **C:\xampp\htdocs** (keep the names):

- **frontend-anis**
- **frontend-iskandar**
- **frontend-balqis**
- **frontend-aisyah**

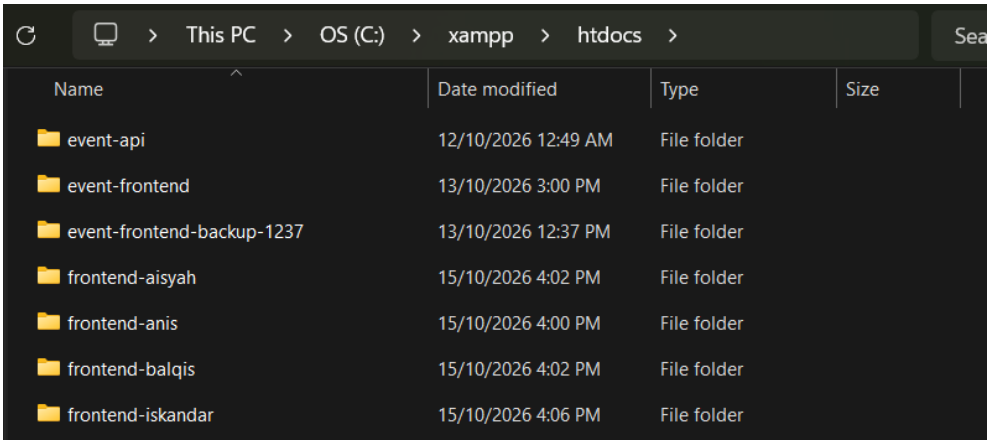

Figure 3: C:\xampp\htdocs after copying (event-api and the four frontends)

Step 4: Set the MySQL password (only if you have one)

A new XAMPP has no MySQL password, so you can skip this step. If your MySQL has a password, open **C:\xampp\htdocs\event-api\config\config.php** in Notepad, put the password in the line **define('DB_PASS', '');** between the two quotes, and save.

Step 5: Import the database

Open **http://localhost/phpmyadmin** and click **Import**. Click **Choose File**, select **C:\xampp\htdocs\event-api\database.sql**, scroll down and click **Go**. The database **event_api** appears on the left.

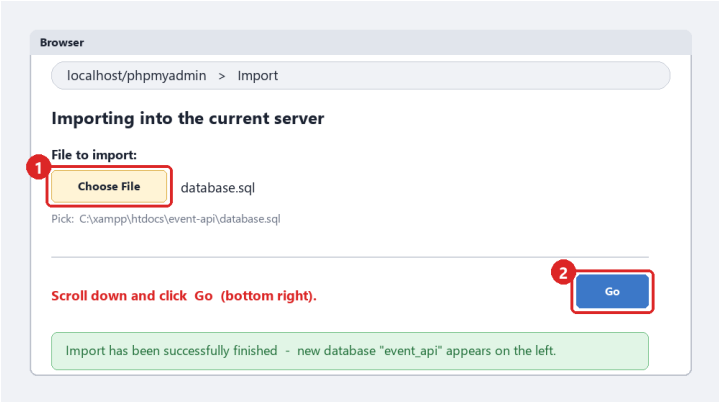

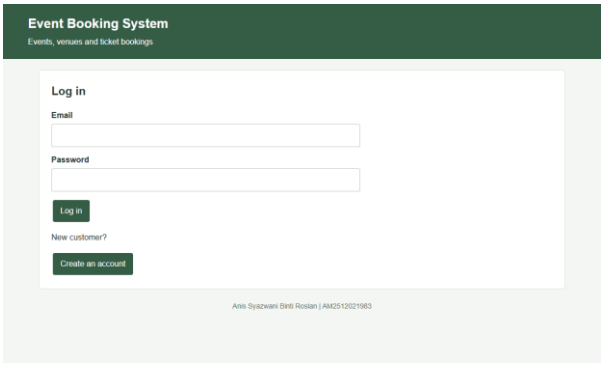

Figure 4: phpMyAdmin Import (illustration)

All four frontends use this same database. Import it only once. Importing again resets the data.

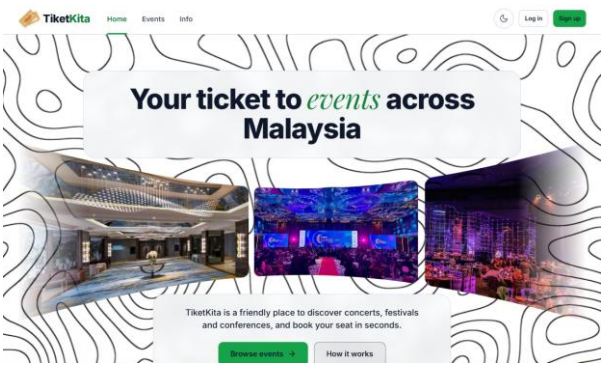

Step 6: Check the backend

Open **http://localhost/event-api/api/events** in the browser. You should see text with curly brackets (JSON), not an error page.

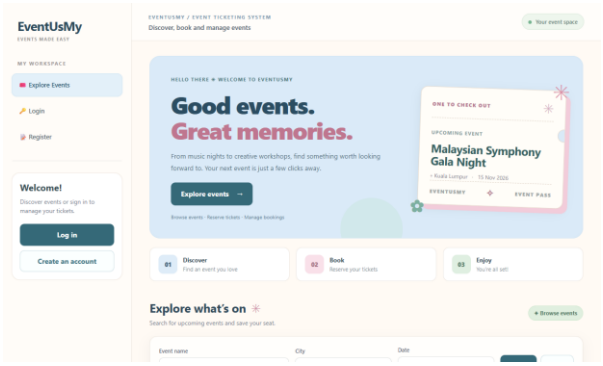

Step 7: Open each frontend and log in

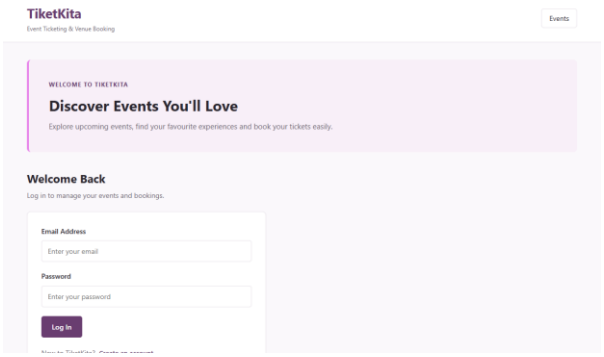

Anis Syazwani
http://localhost/frontend-anis/

Muhammad Iskandar Zakwan
http://localhost/frontend-iskandar/

Nur Balqis Ilyana
http://localhost/frontend-balqis/

Siti Nur Aisyah
http://localhost/frontend-aisyah/

Log in with one of these demo accounts (the same accounts work in all four frontends):

Role	Email	Password
Administrator	admin@eventapi.my	Admin@123
Organiser	weiming@eventapi.my	Organiser@123
Customer	haziq@eventapi.my	Customer@123

If a page does not open: check that Apache and MySQL are green (Step 1), that the folder is named **event-api** (Step 2), and that the database was imported (Step 5).
